

CASE STUDY LAMPTON ROAD

THE PROJECT

Lampton Road was part of a £410m redevelopment project in the heart of Hounslow. The project oversaw the creation of new council offices and residential properties. Bellsure were pleased to partner with Bouygues UK on another successful project.

As requested by Bouygues UK, we provided quotes on bespoke cycle shelters, cycle storage and street furniture. We also supplied CAD designs and .dwg files to build into the clients BIM model. This included a CAD file that included specified materials along with our recommendations, panel details and security fixings.

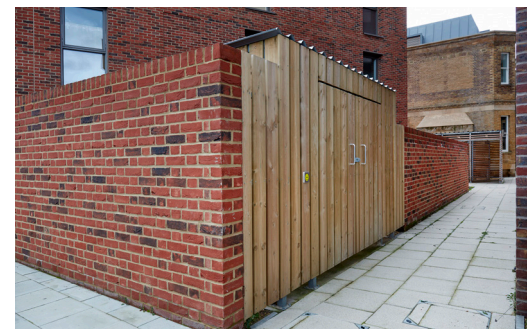

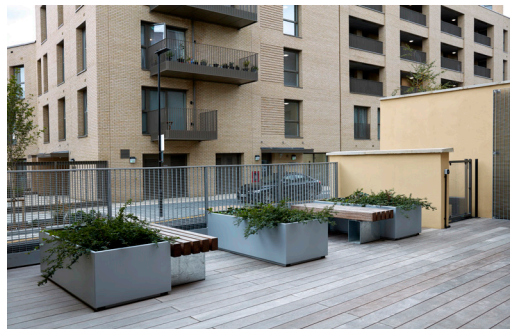

THE SOLUTION

The Streetsure team secured the contract and project managed the supply of the bespoke shelters and cycle storage to suit Bouygues budget and within the timeframe allotted on this project.

For the cycle storage, we supplied our Classic double decker cycle racks and Sheffield stands. These were space planned strategically to fit as many spaces into the area as possible, and provide a greater return on investment for our client.

Our bespoke steel-framed cycle shelters were the chosen option for this design-led project. The shelter was a bespoke galvanised steel frame with Silver Larch timber and green treated softwood framed cladding. This design was chosen to provide longevity and minimal maintenance to the shelter throughout the life cycle of this product. We also supplied the steel and wood bences and solid oak cubes.

For any advice on amenity products for your project, email streetsure@bellsure.co.uk

We consult, design and build both bespoke and standard solutions for a range of projects. Supply only and supply and install packages available.
