

## CASE STUDY MANOR PLACE DEPOT, LONDON

### THE PROJECT

In the heart of Elephant & Castle, Bellsure was asked to supply and install a range of cycle storage products in the multi-billion pound regeneration scheme to transform the area. Manor Place Depot is an unique and exciting collection of 1, 2 and 3 bedroom apartments within this residential development. Using the experience and knowledge of the Streetsure team, we offered a variety of products that suited the specific elements of the brief.

As requested by Durkan Ltd, we provided quotes on bespoke cycle shelters with a green roof and semi vertical cycle racks. We also supplied CAD designs and .dwg files to build into the clients BIM model.

### THE SOLUTION

The Streetsure team secured the contract and project managed the supply and install of these products to budget and within an agreed timeframe.

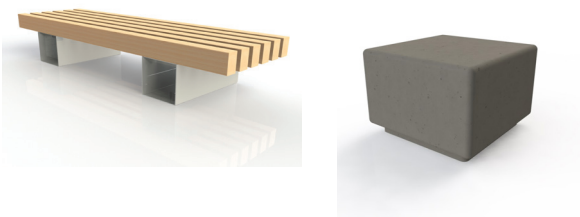

We supplied our Verti45 semi-vertical cycle racks, space planned strategically to fit as many spaces into the area as possible.

Our bespoke green roof shelters were the chosen option for this design-led project. They chose to complete their bespoke shelter with our sedum & wildflower roofs. A great choice for a residential development to encourage natural habitats for wildlife.
