

CASE STUDY WESTGATE, OXFORD

THE PROJECT

The Westgate Centre is a major shopping centre in Oxford that was extensively remodelled and extended between 2016 and 2017. Bellsure was asked to supply and install a shelter and cycle storage. This project required us to create a bespoke shelter that preserved the tree which had a Tree Preservation Order. Using the experience and knowledge of the Streetsure team, we offered a variety of products that suited the specific elements of the brief.

We also supplied CAD designs and .dwg files to build into the clients BIM model. This included a CAD file that included specified materials along with our recommendations, panel details and security fixings.

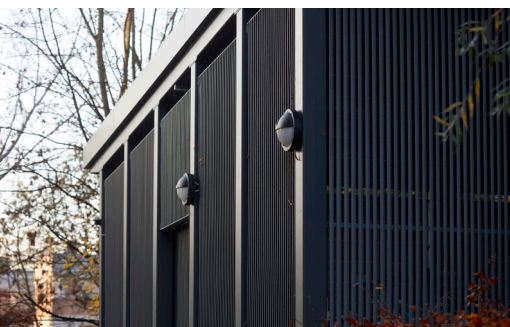

THE SOLUTION

The Streetsure team secured the contract and project managed the supply of these products to budget and within an agreed timeframe.

To overcome the issue of building near a Tree Preservation Order, Streetsure created a structure that could sit on top of four concrete pockets as opposed to the traditional method of digging large foundations and setting it onto a concrete block. This solution would not disturb the tree roots and in turn provided a long-term solution for this unique requirement.

The shelter is a powder coated steel frame clad with aluminium Louvre panels. The flooring system was aluminium Neatdek self-supporting flooring and the roof was a specialist Kalzip standing seam roof. We then used our Classic Double Decker cycle racks as the chosen cycle storage for this project.

Conforming to all site regulations, we erected the shelter within 5 days. There was a tight timeframe due to the imminent opening of the shopping centre. Our installers worked alongside the site manager to ensure a smooth snag free handover - complete with an enhanced operations & maintenance manual.

We consult, design and build both bespoke and standard solutions for a range of projects. Supply only and supply and install packages available.

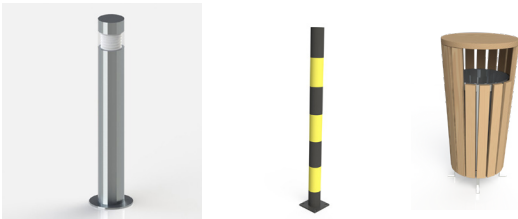

BENCHES & PLANTERS

CYCLE PARKING

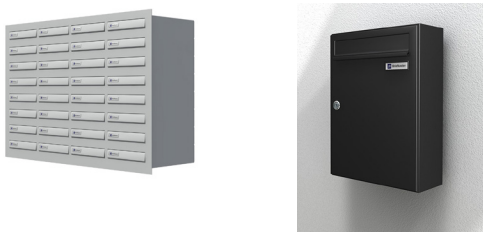

BINS & BOLLARDS

SHELTERS & ENCLOSURES

MAIL BOXES & PARCEL LOCKERS

GREEN ROOF SHELTERS

URBAN RELAY SMART LOCKERS

CAR PARK PRODUCTS

BESPOKE A range of standard size and bespoke products • Concrete, timber, cast iron, galvanised steel options
SUPPLY AND INSTALL Design lead • No minimum order quantity
CAD In-house CAD design dwg files available for BIM implementation
EXPERTISE Dedicated Project Manager and installation team for each project • Quick quote turn around
